

Duke Energy Update for Bald Head Island October 2022

Duke Energy is working hard to complete a multi-year power grid improvement project that will help harden our system serving Bald Head Island to storms and allow for isolation of outages and remote automatic repairs.

Our next priority is installing some of the final, large switchgear equipment custom designed for Bald Head Island. Some work you may observe during the coming weeks includes:

- Temporary traffic control
- Temporary construction fencing
- Concrete pouring
- Additional signage to indicate construction

We'll be coordinating upcoming work at the overlook area with the Village and Bald Head Association. We appreciate the partnership and help minimizing impacts to the area.

As we work on this customized solution to upgrade the system on the entire island, we're trying hard to avoid interruptions. We appreciate your patience when we do encounter unforeseen issues.

If you have questions or feedback, you are welcome to contact Danielle Peoples at Danielle.Peoples@duke-energy.com.
