Forest Vegetation Assessment

Bald Head Woods is a protected maritime evergreen forest – south Atlantic subtype. It has a G2 rank – meaning it is a globally **imperiled community** (at high risk of extinction or elimination due to restricted range, few populations or occurrences, steep declines, very severe threats, or other factors).

- Paired fenced & unfenced plots to evaluate deer herbivory
- Taggart & Long 2011 no effect
- New baseline: Forrester 2020
- Evaluate other threats: development, storms, fragmentation, disease
- Major change: Loss of red bay
- Maintain plots, evaluate 5 yrs
- Possible plant assessment in 2025-26

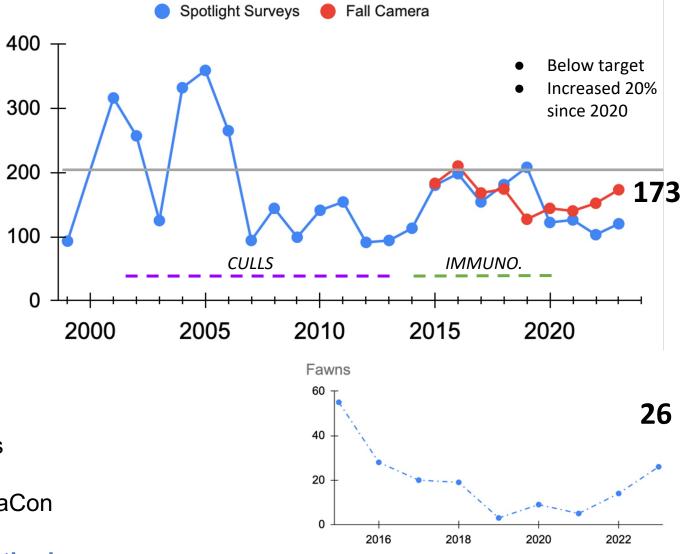

Deer Population Management

- Evaluate white-tailed deer population size
- Summer spotlight surveys, fall camera surveys
- Assess need for population management
- 2014 2020: Immunocontraception using GonaCon

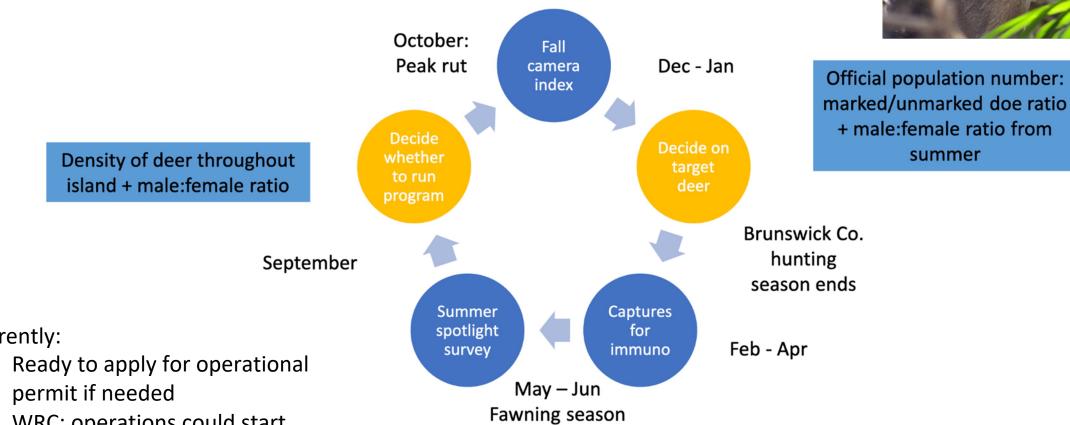

Recommend continuing with current survey methods

Year

Deer Immunocontraception

Currently:

- WRC: operations could start earlier (during hunting season)
- Deer habitat on island changing

Recommend recalculating available deer habitat & reconsidering target population number
