

Detailed Inventory	Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Detailed Inventory

PWS Name: Village of Bald Head Island

PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-Lead, Galvanized Requiring Replacement, or Unknown

Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-Lead, Galvanized Requiring Replacement, or Unknown

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead? Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-Lead, Galvanized Requiring Replacement, or Unknown

Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. Detailed Inventory

PWS Name: Village of Bald Head Island

PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-Lead, Galvanized Requiring Replacement, or Unknown

Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-lead, Galvanized Requiring Replacement, or Unknown

Detailed Inventory	Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-Lead, Galvanized Requiring Replacement, or Unknown

Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-lead, Galvanized Requiring Replacement, or Unknown

Detailed Inventory	Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Detailed Inventory

PWS Name: Village of Bald Head Island
PWSID: NC0410130

10/10/2024

Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Location Information		System-Owned Portion					Customer-Owned Portion						Entire Service Line Material Classification
Location Identifier	System-Owned Portion Service Line Material Classification	If Non-Lead in Column G, Was Material Ever Previously Lead?	Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-Lead, Galvanized Requiring Replacement, or Unknown

Detailed Inventory	Important Instructions: Each row in this worksheet represents one service line connecting the water main to the customer's plumbing. The worksheet includes required and recommended elements; the columns with the aqua shading are required by the LCRR. The green column is a required, auto populated field that will update as systems provide system-owned and customer-owned service line material classification information. Column H is used in the green column

Service Line Size	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		Customer-Owned Portion Service Line Material Classification	Service Line Size	Basis of Material Classification	Was the Service Line Material Field Verified?	If "Yes" Service Line Material Was Field Verified:		
Street Address					Describe the Field Verification Method	Enter the Date of Field Verification					Describe the Field Verification Method	Enter the Date of Field Verification	
Water systems must track addresses of all service lines in their internal inventory. For the publicly accessible version, location identifiers are required for lead and galvanized requiring replacement. If the system does not use addresses for their location identifier, other options could include GPS coordinates, landmark, intersection, block, or other details to specify service line locations.	Drop-down list includes recommended subclassifications. If "Non-Lead Other", describe in Notes field	Select Yes, No, or Don't know. Used to determine if service line is galvanized requiring replacement .	Diameter in inches	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that the record was updated	Drop-down list includes recommended subclassifications. If non-lead other, describe in Notes field.	Diameter in inches	Select option from drop down list. If "Other," describe in the Notes field	Select Yes or No	Select option from drop down list. If "Other," describe in the Notes field	Enter approximate date of field verification or date that record was updated	Auto-filled list includes four required service line classifications of Lead, Non-lead, Galvanized Requiring Replacement, or Unknown
232 SBHW	Non-Lead - Plastic	No	1	Yes	Visual inspection at the meter pit	9/1/2024	Non-Lead - Plastic	1	Field inspection only with no records	Yes	Visual inspection at the meter pit	9/1/2024	Non-Lead
225 WBHW	Non-Lead - Plastic	No	1	Yes	Visual inspection at the meter pit	9/1/2024	Non-Lead - Plastic	1	Field inspection only with no records	Yes	Visual inspection at the meter pit	9/1/2024	Non-Lead
9 Seaholly	Non-Lead - Plastic	No	1	Yes	Visual inspection at the meter pit	7/28/2024	Non-Lead - Plastic	1	Field inspection only with no records	Yes	Visual inspection at the meter pit	7/28/2024	Non-Lead
